Abstract
The incorporation of the European Higher Education Area (EHEA) to the university education system has meant a change in the teaching-learning methodologies of the different qualifications that are included in the Universitat de València (UV). This work takes a look at the transformation that the EHEA has brought to the teaching of toxicology in the UV, in both graduate and postgraduate degrees. In grades of Pharmacy, Environmental Sciences, Sciences and Food Technology and Human Nutrition and Dietetics have remained the core subjects that were taught, but also Toxicology participates in other core subjects and new electives ones. In addition, the Toxicology studies have been included in the Grade of Medicine and Criminology. Currently, the area of toxicology participates in the official Master of Quality and Food Safety and PhD in Food Science. This increased participation of Toxicology in the new graduate degrees responds to the demand from the society of professional with more knowledge in toxicology.
