The main morphological and ecological characteristics of the aquatic plant Lemna minor L. are described, as well as its use as food complement for domestic animals, and in phytoremediation for its ability to absorb nutrients and pollutants from aquatic ecosystems. Its potential as a species used in phytotoxicity tests is also discussed.

**Abstract**

The main morphological and ecological characteristics of the aquatic plant Lemna minor L. are described, as well as its use as food complement for domestic animals, and in phytoremediation for its ability to absorb nutrients and pollutants from aquatic ecosystems. Its potential as a species used in phytotoxicity tests is also discussed.

**Keywords**

Lemna minor, duckweed, aquatic plants, bioremediation, ecotoxicology.
