Abstract
The Chilean Ministry of Education (Mineduc), through the Center of Education and Technology, Enlaces, has developed a proposal for ICT standards to be incorporated into Initial Teacher Training (ITT). In order to facilitate the adoption of these standards in the teacher training curriculum, it has also designed and developed a diploma titled "Incorporation of ICT Standards and Competences in ITT". This diploma is directed toward higher education institutions responsible for ITT, specifically to professors responsible for the design and development of teaching study plans in education faculties, as well as university professionals who participate in the Enlaces network. As a result of this process, they devise projects to insert the ICT into ITT. This article describes the design of the diploma, its implementation in a Learning Management System, the main results of its realization, and the evaluation carried out by participants.

Keywords
Initial teacher training, TIC standards, education informatics, learning virtual environment.
