Abstract

In this paper, there is a brief description related to knowledge, its classification and management. Knowledge management processes are described and the definitions of different authors and their relation with identification of knowledge are presented. The process is analyzed out of the opinion of different authors, as well as the tools used to do so. Components are proposed to identify knowledge in specialties in university entities. In an organized way, the steps to be taken to identify knowledge in said organizations are presented and divided into stages.

Keywords

Knowledge, knowledge management, identification of knowledge.
