Abstract
As techno-science advances and it improves, tourism grows. This article pursues to analyze the importance and interrelation of the technological-scientific advancement of transportation and its contribution to tourism. The theoretical support was based on investigators such as Hunziker and Krapf (1942), Leiper (1979), Núñez (2007), World Tourism Organization (OMT, 2011).
Methodologically, the investigation was documentary, since the means of transportation have cooperated notably with the growth and development of the tourism sector, because man has searched for moving from one place to another and he has had the advances of science and technology. As a conclusion, as the means of transportation have been improved or perfected the tourist demand has grown vertiginously. In the world of trips, cultural, social, economic and political exchanges take place because means of transportation exist.

Keywords
Tourism, transportation means, technology, relationships.
