## Latin America's challenge: A fresh look at industrial policy

## El reto latinoamericano: una visión fresca de la política industrial

When John Price and I wrote *Can Latin America Compete?* several years ago, we were unflinching in our criticism of the region for failing to undertake sweeping microeconomic and institutional changes, such as improved access to capital, investment in infrastructure, and regulatory reform. We urged the region to undertake at the minimum incremental reforms across nearly a dozen areas (including public safety, judicial reform, and education) to boost its competitiveness, lest it continue to lose out to emerging markets in Asia.

Since then, Latin America has, indeed, introduced measures to improve competitiveness; and these changes should be applauded. However, unfortunately, other regions—particularly Asia, Central Europe and Sub-Saharan Africa—have reformed at a faster rate. In addition, even within Latin America the gap has widened between countries and within cities and sub-regions within individual countries. Most notable are the “Asia-facing” nations of Peru, Colombia, Chile, and Mexico versus the “Atlantic-facing” nations of Argentina, Brazil, and Venezuela. One need only read the just-released World Bank *Doing Business 2015* report. The first four countries rank among the top 50 out of 189 nations whereas Argentina (124), Brazil (120) and Venezuela (182) fair miserably.

As all nations in the Hemisphere strive to boost their competitiveness, there is one thing that they would agree upon—regardless of their political and economic orientations—. Namely, that the government's role—mainly via “industrial policy”—is indispensable to compete in regional and global markets. Prior to and even after the failed experiment with the import substitution industrialization model that became so prominent in Latin America from after World War II through the early 1980s, many governments, politicians, economists, large domestic business, unions, and the public at large believed that government could pick winners to propel their economies forward. They bolstered their (mistaken) belief by citing the examples of Brazil's Embraer (while neglecting to mention that nation's disastrous policies to create a home grown computer industry) and Japan's successful electronics industry (but failure to mention the ill-fated effort to foster a semiconductor industry).

Regardless of where one comes down on the issue of industrial policy for Latin America, the role of government has been and always will be prominent. The question then becomes: What kind of

industrial policy for Latin America? Fortunately, economists at the Inter-American Development Bank answer that question resoundingly and convincingly in a monumental study that will influence the economic and policymaking discussions on industrial policy for years to come. What they offer is a diagnosis and blueprint on how to get industrial policy right—with a major focus on increasing the low levels of productivity—. Entitled *Rethinking Productive Development* (they shun the term “industrial policy”, due to its negative connotation in many quarters) and posit that the key question to ask is not “whether” to adopt these policies but “which” and “how”.

In doing so, the IDB proposes three questions as a starting point: (1) what is the diagnosed market failure that justifies government intervention/assistance?, (2) is the policy remedy at good match for the diagnosis?, and (3) what types of institutions with what characteristics are necessary to develop the policy with success?

Productive development policies (PDP) can operate along two dimensions. One dimension consists of specific sectors (vertical policies) or broad based ones (horizontal) not focused on any specific industry. An example of the first would be phytosanitary control; an example of the second would be tax exemptions for the automobile sector. The second dimension relates to the type of intervention. This may be public inputs to improve the business environment; such as upgrading infrastructure, or market interventions such as R&D subsidies or tax reductions.

There is no magic bullet, no quick panacea for Latin America's endemic problem of competitiveness. But by addressing barriers to low productivity, broadening and deepening microeconomic and institutional reform, and embarking upon productive development policies as proposed by the Inter-American Development Bank, the region can achieve significant progress in improving the environment for doing business in the Americas.

# Instrucciones para los autores

*Journal of Economics, Finance and Administrative Science* (antes *Cuadernos de Difusión*) es la revista académica de la Universidad ESAN (Lima-Perú). Está dedicada a las ciencias administrativas, la economía y disciplinas afines y convoca a investigadores y académicos de todo el mundo. Se publica dos veces al año, en junio y en diciembre, en formato impreso y en línea. Está indizada en EBSCO Host Economía y Negocios, Informe Académico de Gale, Cengage Learning, y en Latindex.

Toda colaboración está sujeta a la **aprobación del comité editorial** de la revista, previo informe de lectores-jueces especialistas en el tema tratado, proceso que se conoce como arbitraje por pares. La evaluación incluye el aspecto formal; por tanto, es recomendable que la redacción haya sido revisada.

Solo se aceptan trabajos **inéditos**, en español o en inglés. Por excepción, también se admite aquellos que aún no siendo inéditos hayan sido poco difundidos, así como traducciones al español de artículos originalmente escritos en otros idiomas.

La **extensión es libre**, pero se da preferencia a los trabajos que no excedan de 30 páginas (1.500 caracteres por página).

Los artículos deben empezar con un breve **resumen de su contenido** (aproximadamente 900 caracteres con espacios o 140 palabras), en el cual se especifique el aporte del autor. Al resumen deben seguirle algunas palabras clave que permitan identificar el tema tratado y los códigos JEL.

Todas las **tablas y figuras** deben estar referenciadas en el cuerpo del artículo.

Cada una de las **tablas** se presentará al final del manuscrito, después de la bibliografía, en una hoja que incluirá: a) numeración de la tabla según su orden de aparición en el texto; b) enunciado (título) correspondiente. Se procurará que sean claras y sin rectificaciones. Las siglas y abreviaturas se acompañan siempre de una nota explicativa al pie. Si se tiene que utilizar símbolos, se utilizarán letras minúsculas en superíndice en orden alfabético.

Se considerarán **figuras** las fotografías, gráficos de datos y esquemas. Cada una irá en un archivo aparte preferiblemente en formato JPG o TIFF.

Cuando se desee la publicación de fotografías en color, los gastos correrán a cargo del autor.

El Comité de Redacción de la Revista se reserva el derecho de rechazar, previa información a los autores, las figuras que no reúnan la calidad necesaria para conseguir una buena reproducción.

Las fotografías, esquemas y gráficas irán numeradas de manera correlativa y conjunta como figuras.

Se deben incluir los pies de figura, en una página aparte, al final del manuscrito, tras la bibliografía o tras las tablas, si las hubiera, con la numeración que corresponda a la figura. Cuando los símbolos, flechas, números o letras se utilicen para identificar una o varias partes de las figuras, sería preciso identificar y explicar el significado de cada una con claridad en el pie.

Asimismo, los autores son responsables de obtener los oportunos permisos para reproducir en la revista material (texto, tablas o figuras) publicado previamente. Estos permisos deben solicitarse tanto al autor como a la editorial que ha publicado dicho material.

*Journal of Economics, Finance & Administrative Science* emplea la **norma APA** (American Psychological Association) para la presentación de referencias bibliográficas completas o bibliografía.

- **Para libros:**  
Apellido del autor, nombre o inicial del autor. (Año). *Título del libro*. Lugar: editorial.
- **Para contribuciones en publicaciones periódicas:**  
Apellido del autor, nombre o inicial del autor. (Año, mes si lo hubiera). Título del artículo. *Nombre de la publicación* (opcional: lugar y/o editorial). Volumen, número, paginación del artículo.
- **Para capítulo o parte de una obra:**  
Apellido del autor, nombre o inicial del autor. (Año). Título del capítulo. En nombre o inicial del autor o editor del libro. *Título del libro*. Lugar: editorial, paginación del capítulo.

Las **notas a pie de página o al final del artículo** deben emplearse solo para añadir explicaciones o ampliar información; no deben contener referencias bibliográficas. Las referencias bibliográficas simplificadas se incluyen en el cuerpo del texto usando el llamado método científico: (autor, año) y luego los datos completos se presentan en la bibliografía final.

Los artículos deben acompañarse del **currículo reciente del autor principal**, además de una breve nota biográfica de aproximadamente 900 caracteres.

Después de aceptado, todo trabajo se somete a **corrección de estilo** en coordinación estrecha con su autor, para cuidar el uso adecuado del lenguaje.

Los manuscritos pueden remitirse por vía electrónica a través de la dirección web <http://ees.elsevier.com/jefas/>, donde el autor encontrará toda la información necesaria para el envío. Con este rápido y sencillo método podrá seguir directamente, a través de la página web, el estado del artículo durante todo el proceso de revisión.

# Instructions for authors

*Journal of Economics, Finance and Administrative Science* (previously *Cuadernos de Difusión*) is the academic Journal of the Graduate Business School, *Universidad ESAN* (Lima-Peru). It is dedicated to administrative sciences, economics and related disciplines, and is available to researchers and academics all over the world. It is published twice a year, in June and December, in paper format and online. It is indexed in EBSCO Host Economía y Negocios, Gale Academic Report, Cengage Learning, and in Latindex.

All works are subject to the **approval of the Journal Editorial Committee**, after being reviewed by specialists in the subject treated, a process known as *peer review*. The assessment is of a formal nature, thus it is recommended that the article has been reviewed.

Only **unpublished** works, in Spanish or English, are accepted. Exceptionally, it may also accept those works that, although they may have been published, were not widely circulated, as well as translations into Spanish of articles originally written in other languages.

There is **no limit to the length**, but preference will be given to works that do not exceed 30 pages (1500 characters per page).

The article must begin with a **short abstract of its contents** (approximately 900 characters with spaces or 140 words), in which it specifies the contribution by the author. Several *key words* that will help to identify the subject treated must be added after the abstract, as well as the JEL codes.

All **Tables and Figures** must be referenced in the body of the article.

Each of the **Tables** will be presented at the end of the manuscript, after the bibliography, and on a separate sheet that will include: a) the Table number according to its appearance in the text; b) its title. They must be clear and without any corrections. Initials and abbreviations must always be accompanied by an explanatory footnote. If symbols have to be used, lower case letters in superscript in alphabetical order will be used.

Photographs, data graphs and diagrams will be considered as **Figures**. Each one will be in a separate file, preferably in JPG or TIFF format.

If it is desired to publish colour photographs, the costs will be borne by the author.

The Journal Editorial Committee reserves the right to refuse Figures, with prior notice to the authors, that are not of the required quality to be reproduced well.

Photographs, diagrams and graphs will be numbered consecutively and jointly as Figures.

Figure footnotes must also be included, on a separate page, at the end of the manuscript, after the bibliography and Tables, if there are any, with the numbering that corresponds to the Figure.

When symbols, arrows, numbers, or letters are used to identify one or several parts of the Figures, the significance of each one must be identified and explained clearly in the footnotes.

Furthermore, the authors are responsible for obtaining the appropriate permissions to reproduce previously published material (text, Tables or Figures) in the Journal. These permissions must be requested from the author as well as the publisher that published that material.

Journal of Economics, Finance & Administrative Science uses the **APA** (American Psychological Association) **guidelines** for the presentation of complete literature references or bibliography:

- **For books:**  
Surname, name or initial of the author, (Year). *Book Title*. Place. Publisher.
- **For contributions to Journals:**  
Surname, name or initial of the author, (Year, month if applicable). Title of the article. *Name of the Journal* (optional: place and/or publisher). Volume, Number, pages of the article.
- **A chapter or part of a book:**  
Surname, name or initial of the author, (Year). (Year). Title of the chapter. The name or initial of the author or editor of the book. *Book title*. Place: publisher, pages of the chapter.

The **notes at the foot of the page or at the end of the article** must only be used to add explanations or further information; they must not contain literature references. Simplified literature references are included in the body of the text using the so-called scientific method (author, year) and then the full details are shown in the final bibliography.

The article must be accompanied by a **recent curriculum vitae of the principal author**, as well as a short biographical note of about 900 characters (140 words).

After acceptance, all works are subjected to a **style correction**, in close cooperation with their authors, to ensure the correct use of the language.

Manuscripts must be submitted electronically via the web address, <http://ees.elsevier.com/jefas/>, where the author will find all information required to make the submission. With this simple and rapid method, the author will be able to directly follow the status of their articles throughout the review process via this web page.
