Abstract
The resource "water" is considered a strategic factor for the development of the country, so the Mexican government identified water catchment areas, such as the Valle de Bravo-Amanalco that this is within the "(SA) Presa Stone Corral", which aims to preserve the natural conditions that allow the continuity of the hydrological cycle. Faced with this kind of environmental policy analysis is needed for its establishment, to know if they comply with the function of protection, which comes to integrate social and economic factors, along with the environment.

Keywords
Sanctuary Water (SA), environmental policy, water.
