Abstract
Synopsis and new records for the distribution of the family Physidae in Argentina (Gastropoda: Basommatophora). The species of the family Physidae mentioned for Argentina are Stenophysa marmorata (Guilding, 1828), Physa loosi Holmberg, 1909, Physa aspii Holmberg, 1909, Physella venustula (Gould, 1848) and Physella cubensis (Pfeiffer, 1839). The distribution of the last one is here enlarged to the provinces of Jujuy, Río Negro, San Juan and San Luis. Physella cubensis was mentioned for the first time for Argentina in 1985 for the province of Buenos Aires, being currently found in a large part of the Argentinean territory.
