Abstract
The labor insertion is a matter that repeats itself in all the professions, the principal motive is the difference between the contents that the pupils studies during his formation and the performance of his first professional activity; the most basic levels of formation ruled (Formative Cycles of Average Degree or Certificates of Professional) include very specific contents of that the pupil will take advantage immediately whereas that longer qualifications approach bigger contents, the majority them will not be used his first employment. In case of the industrial engineers the knowledge is very extent and the pupil is not a specialist- To facilitate the labor insertion we propose the accomplishment of an audit of the facilities and we exposed the pupils' experience of Industrial Engineering that have realized practices in the University of Santiago de Compostela (U.S.C.) and in the plant Nissan of Avila throughout last years.
