Abstract

Industrial Testing Laboratory (LIPS) from Cuban Software company Calisoft (Center for the Excellence in Technological Projects’s Development) takes upon to accomplish Release Test to produces artefacts of export and importing projects. Among the test types that the LIPS realizes are Security Test, specifically testing of intrusion to Web applications. The students of 1st and 2nd year under grade are LIPS’s manpower of the UCI (University of Informatics Sciences). As these students are not experienced and knowledge in Security Test, was decided testers prepare a Intrusion Test Procedure for Web applications to guide to unexperienced tester. This work presents the stages of the procedure and evidences proofs and automatization tools that the procedure includes. Also they expose the indicators of check lists and templates of test cases that were circumscribed to show to the testers what that they should test.

Keywords

Security tests, testing procedure, test tools.
